.Net Developer Position open at SUNRISE SYSTEMS INC - APPLY Today

Alageshwaran M <Alageshwaran.M@sunrisesys.com>

Tue, May 12, 2026 at 9:28 AM

To: "sk00aaa@gmail.com" <sk00aaa@gmail.com>, "sklok11@gmail.com" <sklok11@gmail.com>

Hello,

I hope this email finds you well.

I'm reaching out to share an exciting opportunity at **[SUNRISE SYSTEMS INC]** that we believe could be a great fit for your skills and experience.

If you are interested, we would love to schedule a conversation to discuss the position in more detail and to get to know you better. Please let me know a time that works best for you, or feel free to suggest a few options.

.Net Developer

Type = 12 Contract roles

Location – Phoenix, AZ

Experience Required: Experience:

- Five (5) years of experience in software system design, programming and/or software systems and software support, which includes at least one (1) year of supervisory experience. OR Combined Education And

Experience Qualifications:

- Other combinations of education and/or experience may be considered in substitution for minimum qualifications.

Education Required: Education:

- Bachelor's degree in Computer Science or related field.

Skills Required:

Our Preferred Candidate Has:

- Experience leading or managing small development teams in an Agile environment, including task assignment, sprint planning, timesheet approval, performance evaluations, and code review.
- Two (2) or more years of hands-on Angular/TypeScript development experience.
- Experience with Angular framework upgrades and legacy modernization (e.g., AngularJS to Angular, .NET Framework to .NET Core).

- Hands-on experience with Docker containerization of .NET applications, including Dockerfile authoring, Docker Compose for local development, and deploying to container orchestration platforms.
- Experience with enterprise integration patterns including message queuing (IBM MQ), SOAP/WSDL web service consumption, and real-time communication (SignalR).
- Full-stack development experience in a fast-paced, Agile government or court technology environment with multi-generation codebases.
- Experience with reporting technologies such as SSRS and Power BI.
- Experience using agentic AI coding tools and workflows to enhance development productivity and code quality.
- Background in court, justice, or public-sector application development.

Knowledge Of:

- Relational database design, stored procedure development, and query optimization using SQL Server, including multi-schema architectures and stored procedure naming/versioning standards
- N-tier, layered, and microservices architecture patterns, including fluency in core design patterns such as repository, unit-of-work, dependency injection (Unity, [ASP.NET](#) Core DI), and service decomposition strategies
- C#, [ASP.NET](#) MVC, [ASP.NET](#) Web API 2, and [ASP.NET](#) Core, including REST API design, controller routing, and middleware pipelines
- Angular (v8+) and TypeScript, including component architecture, services, RxJS observables, and framework upgrade planning
- AngularJS (1.x) legacy maintenance and migration strategies for transitioning to modern Angular
- Entity Framework, AutoMapper, and data access strategies including Dapper and stored procedure orchestration layers
- JWT-based authentication, cross-application single sign-on, API gateway patterns, and anti-forgery token security
- Microsoft IIS, Windows Server deployment, and environment configuration management across dev, QA, pre-production, and production tiers
- Containerization concepts and tools including Docker, Docker Compose, container image management, and container orchestration platforms (e.g., Kubernetes, Azure Container Apps)
- SignalR for real-time push notifications, IBM MQ for asynchronous messaging, and background job processing patterns
- SOLID principles, unit testing (tSQLt, xUnit), and test-driven development practices
- Agentic AI coding workflows and tools, including AI-assisted code generation, code review augmentation, and integrating large language models into development processes

Skill In:

- Analytical, critical thinking, and problem solving
- Source control and branching strategies using Team Foundation Version Control (TFVC) or Git, including multi-team concurrent development workflows

- Full-stack development across Angular frontends, [ASP.NET](#) Core APIs, and SQL Server stored procedures, with the ability to trace and debug issues end-to-end
- Fluency in core design patterns including repository, unit-of-work, dependency injection, and domain-driven design in large-scale enterprise applications
- Agile development processes, sprint planning, code review leadership, and technical mentoring of development team members
- Legacy application modernization, including phased migration from Classic ASP/AngularJS to [ASP.NET](#) Core and modern Angular
- Decomposing monolithic applications into microservices, defining service boundaries, and containerizing .NET applications with Docker for consistent deployment across environments
- SQL Server performance tuning, execution plan analysis, index optimization, and data forensics across databases with 1,700+ tables and 10,000+ stored procedures
- Leveraging agentic AI tools and workflows to accelerate development, automate repetitive coding tasks, and enhance code quality through AI-assisted review and generation
- Team leadership including timesheet approval, performance evaluations, and conducting regular one-on-one meetings with direct reports

Ability To:

- Establish and maintain positive working relationships with team members, stakeholders, and personnel at all organizational levels.
- Multitask and manage competing priorities in a high-volume, time-critical court technology environment.
- Conduct data forensic operations, audit trail analysis, log mining across log4net/ELMAH logging infrastructure, and root cause analysis in complex multi-tier systems.
- Design, develop, and maintain business-critical court information systems serving judicial operations, including case management, hearing scheduling, sentencing, and document processing workflows.
- Evaluate and plan the transition of existing monolithic services to containerized microservices, including defining API contracts, managing inter-service communication, and establishing CI/CD pipelines for container-based deployments.
- Supervise and develop team members, including approving timesheets, conducting performance evaluations, and holding regular one-on-one meetings to support professional growth.
- Communicate effectively and professionally with personnel at all organizational levels.

Additional Information: Working Conditions: While performing the duties of this job, the employee may need to communicate clearly, perceive details of objects that are close by, and maintain various physical positions for extended periods, such as sitting, standing, or walking. The job may involve using hands for tasks such as typing, handling objects, or operating tools, as well as reaching with hands and arms. Occasionally, the employee may be required to move or lift objects weighing up to 20 pounds. Reasonable accommodations may be made to enable individuals with disabilities to perform these functions
